

An Event-B Specification of Library

This project tests extracting information out from a machine through parameters prefixed with out_.

1	MACHINE Library	2
1.1	<i>books borrowers loans</i>	2
1.2	<i>addBook(b)</i>	2
1.3	<i>addBorrower(b)</i>	2
1.4	<i>addLoan(book borr)</i>	2
1.5	<i>returnBook(book)</i>	3
1.6	<i>isBookOnLoan(book out_onloan)</i>	3
1.7	<i>whoBorrowsBook(book out_borrower)</i>	3

VARIABLES

1.1

books All books that are owned by the library.
borrowers All borrowers registered at the library.
loans All books that are loaned out.

INVARIANTS

inv1: $books \in \mathbb{P}(\mathbb{N})$ We represent books
inv2: $borrowers \in \mathbb{P}(\mathbb{N})$ and borrowers using integers.
inv3: $loans \in books \leftrightarrow borrowers$ A book is only loaned to one borrower at a time.

EVENT INITIALISATION

THEN

init1: $books := \emptyset$
init2: $borrowers := \emptyset$
init3: $loans := \emptyset$

END

EVENT addBook

1.2

Add a new book to the library, the book must not have been added before.

ANY

b

WHERE

grd1: $b \in \mathbb{N}$
grd2: $b \notin books$

THEN

act1: $books := books \cup \{b\}$

END

EVENT addBorrower

1.3

Add a new borrower to the library, the borrower must not have been added before.

ANY

b

WHERE

grd1: $b \in \mathbb{N}$
grd2: $b \notin borrowers$

THEN

act1: $borrowers := borrowers \cup \{b\}$

END

EVENT addLoan

1.4

Loan a book to a borrower, the book must not be on loan already.

ANY

borr
book

WHERE

`grd1:` $borr \in borrowers$ Valid borrower.
`grd2:` $book \in books$ Valid book.
`grd3:` $book \mapsto borr \notin loans$ Not a necessary test, but used for this example anyway.
`grd4:` $book \notin \text{dom}(loans)$ The book is not loaned out already.

THEN

`act1:` $loans(book) := borr$ Add a new loan in the storage.

END

EVENT `returnBook`

1.5

Return a book, the book must be on loan.

ANY

$book$

WHERE

`grd1:` $book \in books$ Valid book.
`grd2:` $book \in \text{dom}(loans)$ The book is on loan.

THEN

`act1:` $loans := \{book\} \triangleleft loans$ Remove the loan from storage.

END

EVENT `isBookOnLoan`

1.6

Check if a book is on loan.

ANY

$book$

out_onloan

WHERE

`grd1:` $book \in books$
`grd2:` $out_onloan = \text{bool}(book \in \text{dom}(loans))$

END

EVENT `whoBorrowsBook`

1.7

Return who is borrowing a book.

ANY

$book$

$out_borrower$

WHERE

`grd1:` $book \in books$ Querying a valid book?
`grd2:` $book \in \text{dom}(loans)$ That is on loan?
`grd3:` $out_borrower = loans(book)$ Return the result through out.
