

# An Event-B Specification of Library

This project tests extracting information out from a machine through parameters prefixed with out\_.

<b>1</b>	<b>MACHINE Library</b>	<b>2</b>
1.1	<i>books borrowers loans</i> . . . . .	2
1.2	<i>addBook(b)</i> . . . . .	2
1.3	<i>addBorrower(b)</i> . . . . .	2
1.4	<i>addLoan(book borr)</i> . . . . .	2
1.5	<i>returnBook(book)</i> . . . . .	3
1.6	<i>isBookOnLoan(book out_onloan)</i> . . . . .	3
1.7	<i>whoBorrowsBook(book out_borrower)</i> . . . . .	3

**VARIABLES**

1.1

*books*      All books that are owned by the library.  
*borrowers*   All borrowers registered at the library.  
*loans*        All books that are loaned out.

**INVARIANTS**

**inv1:**    *books*  $\in \mathbb{P}(\mathbb{N})$                       We represent books  
**inv2:**    *borrowers*  $\in \mathbb{P}(\mathbb{N})$                 and borrowers using integers.  
**inv3:**    *loans*  $\in \text{books} \leftrightarrow \text{borrowers}$

A book is only loaned to one borrower at a time.

**EVENT INITIALISATION****THEN**

**init1:**    *books*  $:= \emptyset$   
**init2:**    *borrowers*  $:= \emptyset$   
**init3:**    *loans*  $:= \emptyset$

**END****EVENT addBook**

1.2

Add a new book to the library, the book must not have been added before.

**ANY**

*b*

**WHERE**

**grd1:**    *b*  $\in \mathbb{N}$   
**grd2:**    *b*  $\notin \text{books}$

**THEN**

**act1:**    *books*  $:= \text{books} \cup \{b\}$

**END****EVENT addBorrower**

1.3

Add a new borrower to the library, the borrower must not have been added before.

**ANY**

*b*

**WHERE**

**grd1:**    *b*  $\in \mathbb{N}$   
**grd2:**    *b*  $\notin \text{borrowers}$

**THEN**

**act1:**    *borrowers*  $:= \text{borrowers} \cup \{b\}$

**END****EVENT addLoan**

1.4

Loan a book to a borrower, the book must not be on loan already.

**ANY**

*borr*

*book*

WHERE

**grd1:**  $borr \in borrowers$  Valid borrower.  
**grd2:**  $book \in books$  Valid book.  
**grd3:**  $book \mapsto borr \notin loans$   
Not a necessary test, but used for this example anyway.

**grd4:**  $book \notin \text{dom}(loans)$   
The book is not loaned out already.

THEN

**act1:**  $loans(book) := borr$  Add a new loan in the storage.

END

EVENT **returnBook**  
Return a book, the book must be on loan.

1.5

ANY

*book*

WHERE

**grd1:**  $book \in books$  Valid book.  
**grd2:**  $book \in \text{dom}(loans)$  The book is on loan.

THEN

**act1:**  $loans := \{book\} \triangleleft loans$  Remove the loan from storage.

END

EVENT **isBookOnLoan**  
Check if a book is on loan.

1.6

ANY

*book*  
*out\_onloan*

WHERE

**grd1:**  $book \in books$   
**grd2:**  $out\_onloan = \text{bool}(book \in \text{dom}(loans))$

END

EVENT **whoBorrowsBook**  
Return who is borrowing a book.

1.7

ANY

*book*  
*out\_borrower*

WHERE

**grd1:**  $book \in books$  Querying a valid book?  
**grd2:**  $book \in \text{dom}(loans)$  That is on loan?  
**grd3:**  $out\_borrower = loans(book)$  Return the result through out.
